

Solve each problem.

1) $\frac{4}{9} - \frac{1}{3} =$

2) $\frac{1}{2} + \frac{1}{4} =$

**Answers**

1. _____

2. _____

3. _____

4. _____

5. _____

6. _____

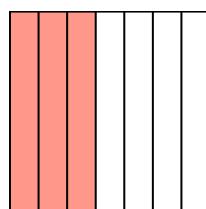

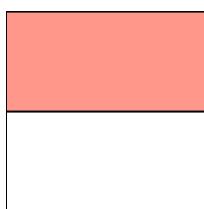

7. _____

8. _____

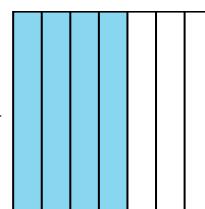

9. _____

10. _____

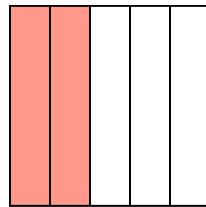

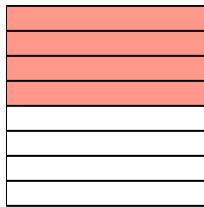

3) $\frac{1}{2} - \frac{3}{7} =$

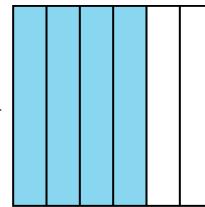

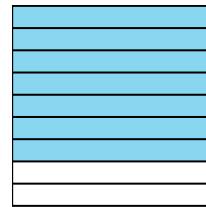

4) $\frac{4}{6} + \frac{4}{7} =$

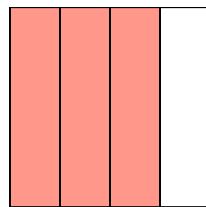

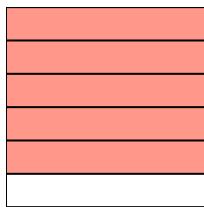

5) $\frac{4}{8} - \frac{2}{5} =$

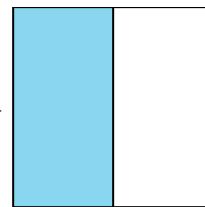

6) $\frac{7}{9} + \frac{4}{6} =$

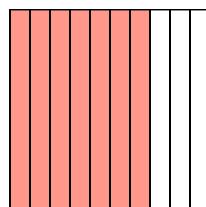

7) $\frac{5}{6} - \frac{3}{4} =$

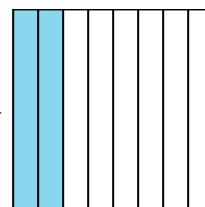

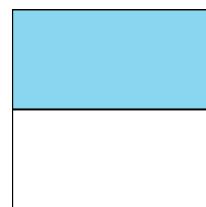

8) $\frac{3}{6} + \frac{1}{2} =$

9) $\frac{5}{6} - \frac{7}{10} =$

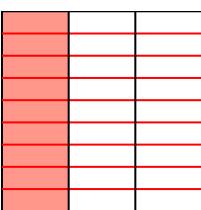

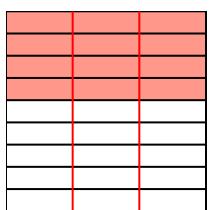

10) $\frac{1}{2} + \frac{2}{8} =$

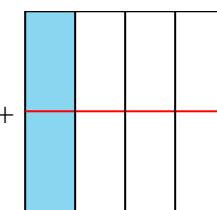

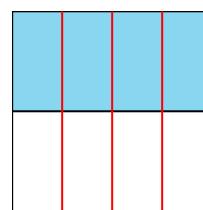

**Solve each problem.**

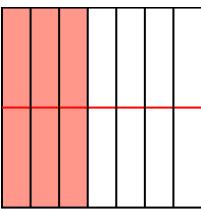

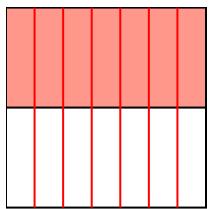

1) $\frac{4}{9} - \frac{1}{3} = \frac{4}{9} - \frac{3}{9} = \frac{1}{9}$

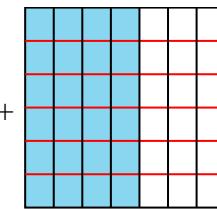

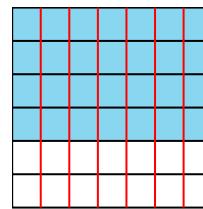

2) $\frac{1}{2} + \frac{1}{4} = \frac{2}{4} + \frac{1}{4} = \frac{3}{4}$

**Answers**1. $\frac{1}{9}$ 2. $\frac{3}{4}$ 3. $\frac{1}{14}$ 4. $1\frac{10}{42}$ 5. $\frac{4}{40}$ 6. $1\frac{8}{18}$ 7. $\frac{1}{12}$ 8. $1\frac{0}{6}$ 9. $\frac{4}{30}$ 10. $\frac{6}{8}$

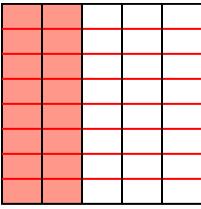

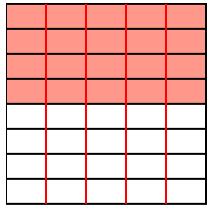

3) $\frac{1}{2} - \frac{3}{7} = \frac{7}{14} - \frac{6}{14} = \frac{1}{14}$

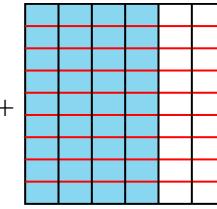

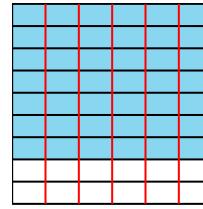

4) $\frac{4}{6} + \frac{4}{7} = \frac{28}{42} + \frac{24}{42} = 1\frac{10}{42}$

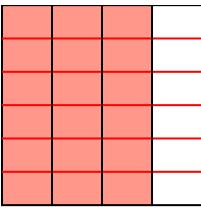

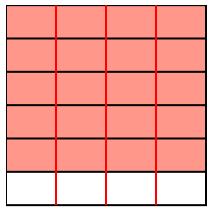

5) $\frac{4}{8} - \frac{2}{5} = \frac{20}{40} - \frac{16}{40} = \frac{4}{40}$

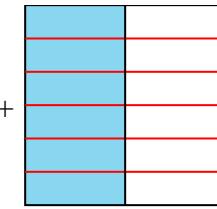

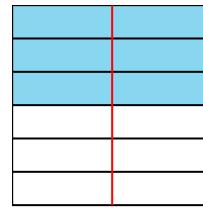

6) $\frac{7}{9} + \frac{4}{6} = \frac{14}{18} + \frac{12}{18} = 1\frac{8}{18}$

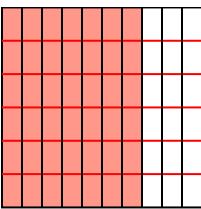

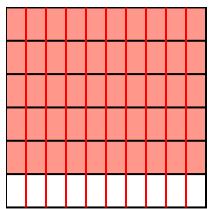

7) $\frac{5}{6} - \frac{3}{4} = \frac{10}{12} - \frac{9}{12} = \frac{1}{12}$

8) $\frac{3}{6} + \frac{1}{2} = \frac{3}{6} + \frac{3}{6} = 1\frac{0}{6}$

9) $\frac{5}{6} - \frac{7}{10} = \frac{25}{30} - \frac{21}{30} = \frac{4}{30}$

10) $\frac{1}{2} + \frac{2}{8} = \frac{4}{8} + \frac{2}{8} = \frac{6}{8}$
