

Solve each problem.

1) $\frac{6}{10} - \frac{2}{5} =$

2) $\frac{4}{7} + \frac{3}{10} =$

**Answers**

1. _____

2. _____

3. _____

4. _____

5. _____

6. _____

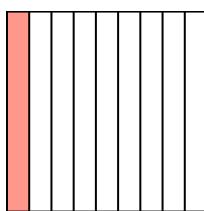

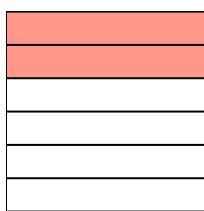

7. _____

8. _____

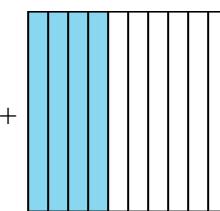

9. _____

10. _____

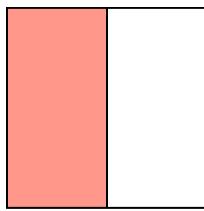

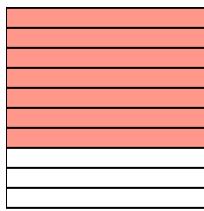

3) $\frac{2}{6} - \frac{1}{9} =$

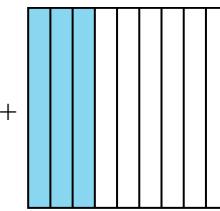

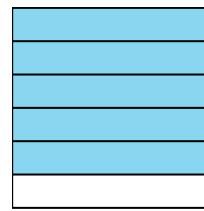

4) $\frac{4}{7} + \frac{4}{10} =$

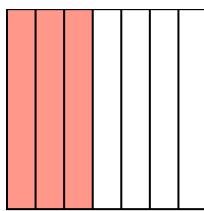

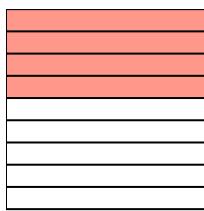

5) $\frac{7}{10} - \frac{1}{2} =$

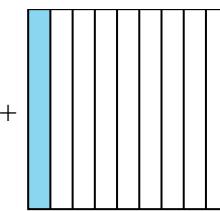

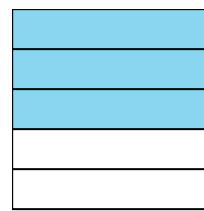

6) $\frac{5}{6} + \frac{3}{9} =$

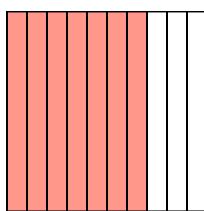

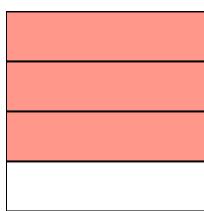

7) $\frac{4}{9} - \frac{3}{7} =$

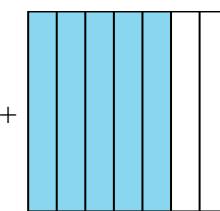

8) $\frac{3}{5} + \frac{1}{9} =$

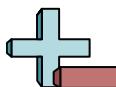

9) $\frac{3}{4} - \frac{7}{10} =$

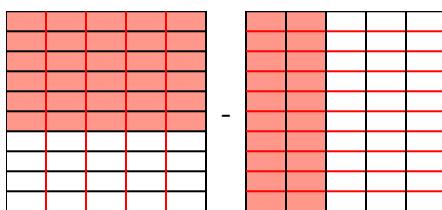

10) $\frac{8}{9} + \frac{5}{7} =$

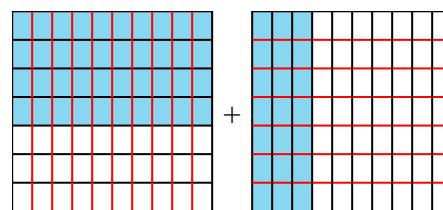

**Solve each problem.**

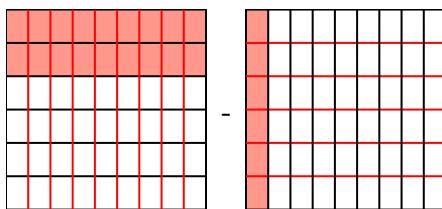

1) $\frac{6}{10} - \frac{2}{5} = \frac{6}{10} - \frac{4}{10} = \frac{2}{10}$

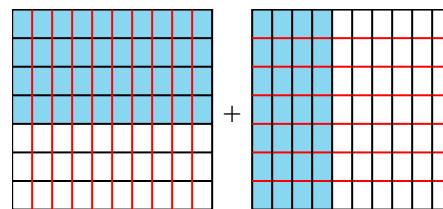

2) $\frac{4}{7} + \frac{3}{10} = \frac{40}{70} + \frac{21}{70} = \frac{61}{70}$

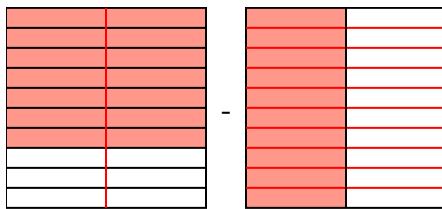

3) $\frac{2}{6} - \frac{1}{9} = \frac{6}{18} - \frac{2}{18} = \frac{4}{18}$

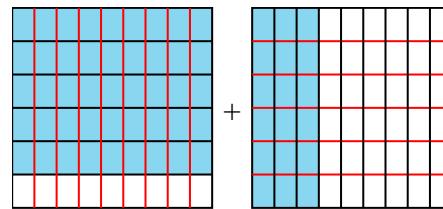

4) $\frac{4}{7} + \frac{4}{10} = \frac{40}{70} + \frac{28}{70} = \frac{68}{70}$

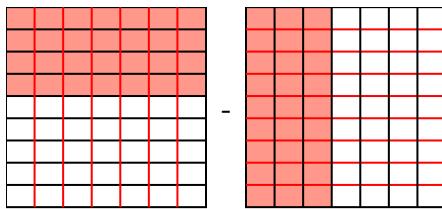

5) $\frac{7}{10} - \frac{1}{2} = \frac{7}{10} - \frac{5}{10} = \frac{2}{10}$

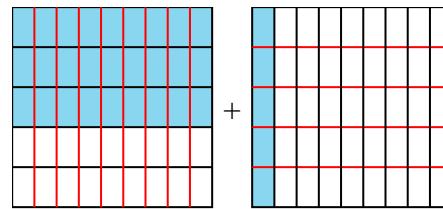

6) $\frac{5}{6} + \frac{3}{9} = \frac{15}{18} + \frac{6}{18} = 1\frac{3}{18}$

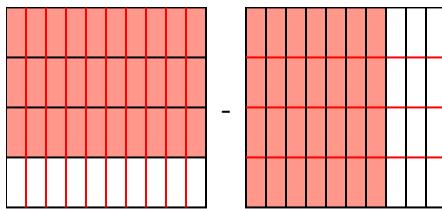

7) $\frac{4}{9} - \frac{3}{7} = \frac{28}{63} - \frac{27}{63} = \frac{1}{63}$

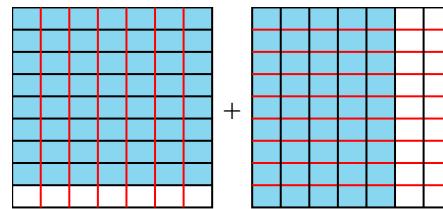

8) $\frac{3}{5} + \frac{1}{9} = \frac{27}{45} + \frac{5}{45} = \frac{32}{45}$

9) $\frac{3}{4} - \frac{7}{10} = \frac{15}{20} - \frac{14}{20} = \frac{1}{20}$

10) $\frac{8}{9} + \frac{5}{7} = \frac{56}{63} + \frac{45}{63} = 1\frac{38}{63}$

**Answers**1. $\frac{2}{10}$ 2. $\frac{61}{70}$ 3. $\frac{4}{18}$ 4. $\frac{68}{70}$ 5. $\frac{2}{10}$ 6. $1\frac{3}{18}$ 7. $\frac{1}{63}$ 8. $\frac{32}{45}$ 9. $\frac{1}{20}$ 10. $1\frac{38}{63}$
