Comparing Measurement with Tables and Equations Name:						
Solve each problem.						Answers
1)	Two companies are selling electricity by Kilo-watt hour. The cost of electricity for Company A is represented in the table below, while the cost for Company B is represented by an equation, with y representing the total cost in dollars for x kilowatt hours. Company A Company B y = 0.08x					1.   2.
		Hours		Cost (\$)		3
	1315			105.20		
	1304			104.32		
2)	represented in the table below, while the cost for Company B is represented by an equation, with y representing the total cost in dollars for x pounds of jerky. Company A Company B					
	Total PoundsTotal C (\$)11286.0				y = 30.00x	
	14 364.00					
	Find the total cost in dollars of buying 11 pounds of jerky from the more expensive company.					
3)	Two contractors are bidding on building a house. Contractor A's price is represented in the table below. Contractor B's price is represented by an equation, with y representing the total price and x representing the square feet of the house.					
	_	Contractor A Contractor B				
		Square	Total		y = 116x
