

**Solve each problem.**

- 1) At the 67¢ store they were selling lollipops for \$0.67. If Maria bought a lollipop and had to pay 7¢ in tax, what was the total price she paid?
- 2) $6 + 7 = \underline{\quad}$
- 3) Will was in 7th grade. While doing math one day, he noticed there was 67 tiles on the classroom ceiling. In the cafeteria there was 67 more tiles than in the classroom. How many tiles were in the cafeteria?
- 4) $67 - 7 = \underline{\quad}$
- 5) Sam was reading his favorite book. The book has a total of 67 pages and during reading time he read 6 pages. How many pages does he still have to read?
- 6) $67 + 6 = \underline{\quad}$
- 7) $76 - 6 = \underline{\quad}$
- 8) $67 - 6 = \underline{\quad}$
- 9) $7 + 6 = \underline{\quad}$
- 10) Faye had 67 apps on her phone. If she deleted 7 of them, how many apps would she have left?
- 11) Ned was doing chores to earn money to buy a toy that cost \$6.77. In the first week he earned \$6. In the second week he earned \$7. How much money did he earn over the 2 week?
- 12) $67 + 7 = \underline{\quad}$
- 13) $7 - 6 = \underline{\quad}$
- 14) $76 - 7 = \underline{\quad}$
- 15) $67 + 67 = \underline{\quad}$
- 16) Janet had 7 boxes of snap pops. She gave away 6 boxes to her friends. How many boxes does she have left?
