

**Determine which choice shows the expression used to solve the problem.****Answers**

- 1) A chef can cook six meals in a minute. If he cooked fifty-four meals, how long did it take him?  
A.  $54 + 6$                       B.  $54 - 6$                       C.  $54 \times 6$                       D.  $54 \div 6$
- 2) Carol was practicing for a marathon. She practiced for four days, running eight miles each day. How many miles did Carol run altogether?  
A.  $4 + 8$                       B.  $8 - 4$                       C.  $4 \times 8$                       D.  $8 \div 4$
- 3) The mailman delivered five pieces of mail to a house. If two of the pieces were junkmail, how many pieces were actually good?  
A.  $5 + 2$                       B.  $5 - 2$                       C.  $5 \times 2$                       D.  $5 \div 2$
- 4) Adam read six chapters of a book. If each chapter was three pages, how many pages did he read?  
A.  $6 + 3$                       B.  $6 - 3$                       C.  $6 \times 3$                       D.  $6 \div 3$
- 5) Faye bought nine new shirts for school. If she already had eight shirts, how many did she own total?  
A.  $9 + 8$                       B.  $9 - 8$                       C.  $9 \times 8$                       D.  $9 \div 8$
- 6) An architect was building his two story house. On the first floor the house had five bedrooms and the second floor had seven bedrooms. How many bedrooms does the house have total?  
A.  $5 + 7$                       B.  $7 - 5$                       C.  $5 \times 7$                       D.  $7 \div 5$
- 7) Billy won thirteen tickets playing games at the arcade. If he spent eight tickets buying a water gun, how many tickets did he still have?  
A.  $13 + 8$                       B.  $13 - 8$                       C.  $13 \times 8$                       D.  $13 \div 8$
- 8) A delivery driver had to deliver six packages. At his first stop he dropped off two. How many packages does he still have to deliver?  
A.  $6 + 2$                       B.  $6 - 2$                       C.  $6 \times 2$                       D.  $6 \div 2$
- 9) Tiffany's dad took her and some friends out to eat for her birthday. If each meal costs eight dollars and her dad paid for three meals, how much did he spend?  
A.  $3 + 8$                       B.  $8 - 3$                       C.  $3 \times 8$                       D.  $8 \div 3$
- 10) The roller coaster at the state fair costs two tickets per ride. If six friends were going to ride the roller coaster, how many tickets would they need?  
A.  $2 + 6$                       B.  $6 - 2$                       C.  $2 \times 6$                       D.  $6 \div 2$
