- 1) The equation 26.26=(13.13)2 shows how much it cost for a company to buy 2 new uniforms. How much does it cost per uniform?

Answers

- 2) To determine how many pages would be needed to make 6 books you can use the equation, 432=(72)6. How many pages are in one book?
- 3) At the hardware store you can buy 3 boxes of bolts for \$5.64. This can be expressed by the equation Y=KX. How much would it cost for one box?
- 4) A grocery store paid \$176.10 for 5 crates of milk. This can be expressed by the equation Y=KX. How much was it for one crate?
- 5) A movie theater used Y=KX to calculate how much money they made selling 2 buckets of popcorn. They determined they made 15.82 dollars. How much was it for each bucket?

- 6) A baker used the equation Y=KX to calculate that he had made \$28.68 after selling 2 boxes of his cookies for \$14.34 each. How much would he have made had he sold 6

- 7) An industrial printing machine printed 1540 pages in 4 minutes. How much would it have printed in 9 minutes?

- 8) The equation Y=KX shows you would make \$26.88 for recycling 6 pounds of cans. How much would you make if you recycled 9 pounds?
- 9) A florist used the equation Y=KX to determine how many flowers she'd need for 7 bouquets. She determined she'd need 147 flowers. How many flowers were in each bouquet?
- **10**) A construction contractor used the equation 13.02=(2.17)6 to calculate how much 6 boxes of nails would cost him. How much would 9 boxes of nails cost him?

boxes?
