- 3) Rotate the shape  $248^\circ$  around the point (0,0).

- 4) Rotate the shape  $140^\circ$  around the point (0,0).

Rotate each shape. Answer as the new coordinates.

$\theta$  = Angle of Rotation

## Rotation Formula

$$x1 = x \times \cos(\theta) - y \times \sin(\theta)$$

$$y1 = x \times \sin(\theta) + y \times \cos(\theta)$$

In the example to the right the shape is at coordinates (1,4). Lets find the coordinates if we rotated the shape  $60^\circ$ .

1.  $x1 = 1 \times \cos(60) - 4 \times \sin(60)$   
 $y1 = 1 \times \sin(60) + 4 \times \cos(60)$
2.  $x1 = 1 \times 0.5 - 4 \times 0.87$   
 $y1 = 1 \times 0.87 + 4 \times 0.5$
3.  $x1 = 0.5 - 3.48$   
 $y1 = 0.87 + 2$
4.  $x1 = -2.98$   
 $y1 = 2.87$
5. Looking at shape, we can see that rotated  $60^\circ$  it is at  $(-2.98, 2.87)$ .
